- Certified Magnafluxing
- Quick Delivery
- Coil Replacement
- Brake Shoe Replacement
- Brake Relining

Features:

- All AISE sizes available 8, 10, 13, 16, 19, 23 and 30 inches
- Cutler Hammer, Square D, Clark, G.E., Westinghouse and P&H
- New and old style brakes have a One year guarantee

Remanufacturing

After a brake has been disassembled and in-spected, it is moved to the production area where remanufacturing begins. Each step is thoroughly performed by a qualified technician:

- All parts are sandblasted and cleaned.
- Any worn bushings or pins are replaced to original manufacturer specs.
- Coils are tested.
- Coil leads are inspected and repaired. Brake shoes are relined with non-asbestos linings. Shoes are riveted unless other wise specified.
- Brakes are reassembled and painted with rustoleum navy-gray paint.

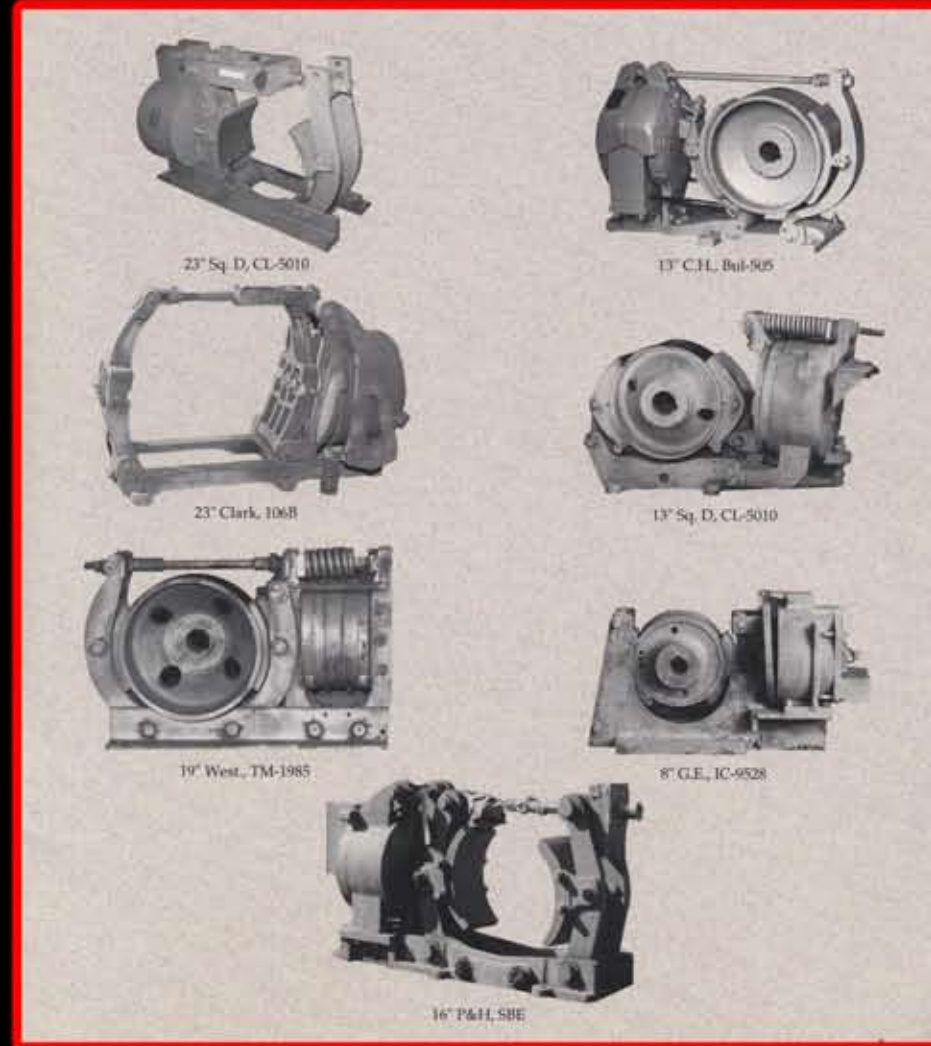

Testing

For optimum quality assurance, all Casey remanufactured brakes are tested electrically and mechanically on new, state-of-the-art SCR test panels. Results are recorded and distributed to the customer.

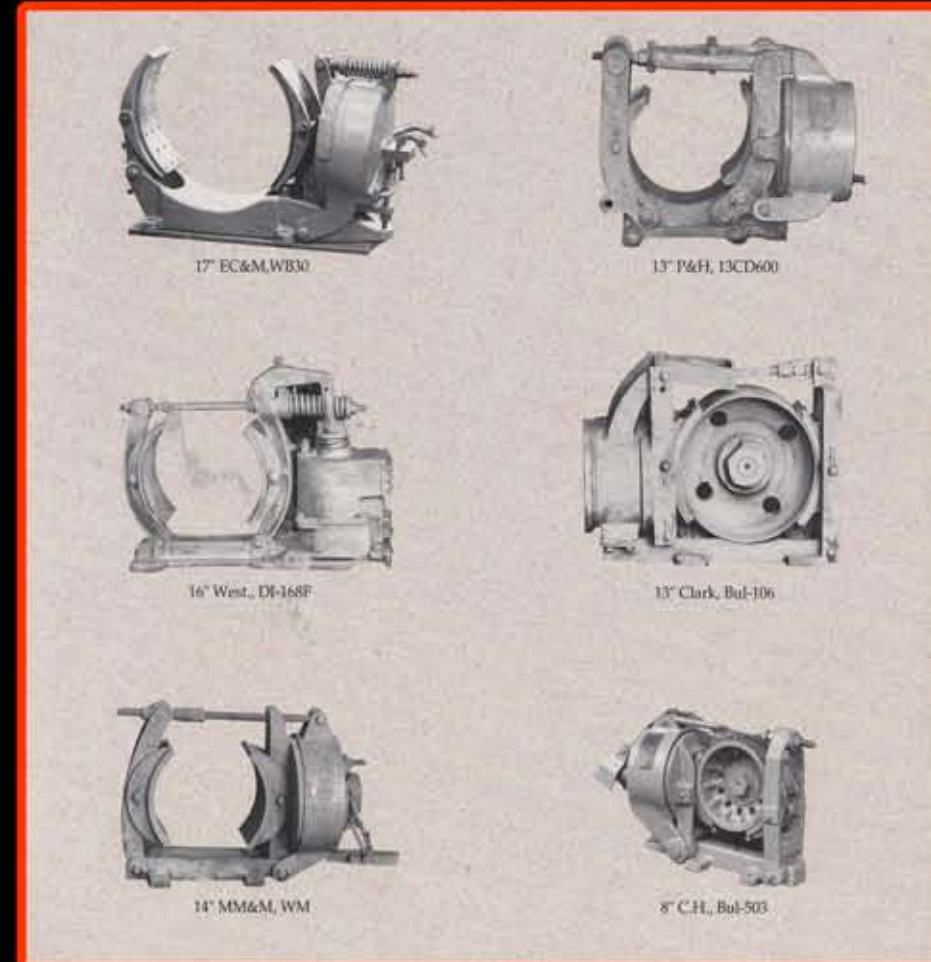

Completion

Immediately following the remanufacturing process, brakes are reassembled and moved to the shipment area. New Casey nameplates, complete with all available coil information are secured to the brake. Repair Sheets and Parts Requirement Records are prepared for delivery.
